Suzanne. Hill

However, I believe the order is an fill (arr) due to using a function without the aperand sarr.

array[1]-100; The function called is a pointer variable.

array(1)-100; arranay;

int main(){
int *arr-NULL.
fill(arr),
printf(*arr[0]-*id.arr[1]-*idn*,arr[0].arr[1]);
return 0;
}

What is the output of the following program? Describe your understanding of the program and explain why it prints out the output.

#include side in the character of the character over which is e, minimum and () {

char name []-"Alice Bob";

char *purname; - points to first element in name

other *purname; - points to first element in name

property of dereferred and what side the first character to the chare of purpose course e to the 4 character over from the first character in the printing of the point of the printing of the printing of the character over which is i.

property of the point of the character over to the left printing of the printing of the character of the array mame, printing of purpose to the character of the array mame.

Prints the chare e trum the dereference of H@.

Thus is why it will print out ile

8) Use gdb to debug the program below. Set a breakpoint at 'fact' function and examine the stack using "hacktrace" to find the bug. Describe the bug you find.

#include <stdio.h> not in executable format: I've format
int fact(int x){
 return x*fact(x-1);
}
int main(){
 printf("%d\n",fact(5));
}
